

DEDICATION TO ENVIRONMENT

We being an environmental cognizant entity accept and advocate the universal truth that if we do not permit the earth to produce beauty and joy, it will in the end not produce food either and we in love of our mother nature commit ourselves to make such products which let our earth to produce beauty and joy. A promise is a cloud; fulfillment is rain and we have fulfilled our promise by inducting a product Green Spot Fertilizer which is 100% absorbable, environmental friendly and auxiliary to the granular fertilizers which leaves residue in the soil.

Turabworld is committed to conduct its business corresponding to environmental regulations, we aim to conserve natural resources and minimize waste through source reduction and recycling; handle and dispose of wastes through safe, environmentally responsible methods; encourage energy efficiency and the use of renewable energy sources; and encourage our business partners and suppliers to strive for the same high levels of environmental performance.

We understand that we do not inherit the earth from our ancestors; we borrow it from our children and we are obligated to return it to our children in a manner it produces beauty and bliss to them.
